PHOTOGRAPHER: Christopher Frederick Jones

It is intended to respect the existing house as it displays strong qualities that are simple in form. In saying this there would most likely be intervention with the internal planning to create a design that is best suited to the lifestyle and expectations of a family with four children.

Outside of the existing envelope there seems to be potential to explore a bold, contemporary language of architecture that can contrast this existing style. The designers create a functional family home to cater for all their needs, and utilize the isolated environment to create indoor and outdoor spaces which are ideal for entertaining.

This open design not only leads the outdoor landscape into indoor to become a vivid picture of interior, but also lets the owners feel that they are close to the nature. The style of the case is simple and modern but luxurious.
