Designing blueprints for excellence

The *Smart and Sustainable Homes Program* is making its blueprint on the industry by designing and building sustainable display homes throughout Queensland.

By using the triple bottom line concept of balancing environmental, economic and social sustainability, the display homes meet the Smart and Sustainable Homes design objective of complementing the varying conditions in the different climatic regions in Queensland.

The program, which is managed by the Department of Public Works through its Technology and Development Division, has already seen the completion of 14 display houses and one home-unit complex across Queensland.

The program supports the Queensland Government's commitment to reduce greenhouse gas emissions in the housing sector and has established the Queensland Government at the forefront of sustainable home design in Australia.
